METHOD, SYSTEM, AND PROGRAM FOR PROCESSING

TRANSACTION REQUESTS DURING A PENDENCY OF

A DELAYED READ REQUEST

ABSTRACT

5   Provided are a method, system, and program for processing operations in a

system including a bus, a target device and devices capable of accessing the target

device over the bus. The target device receives a transaction request from one of the

devices over the bus and determines whether a delayed read request is pending after

receiving the transaction request. The target device issues a command to disconnect

10   the device initiating the transaction request from the bus. The device initiating the

transaction request is allowed to reconnect to the bus and complete the transaction

request after the delayed read request is completed.
